

Well...I'm a little nervous...but here goes...  
"A generic claim to an elected invention"

I claim:

A multipurpose hand tool with a variable edge which effectively and releasably orients itself to a users hand, and therein effects, manipulates and reacts with and to virtually all natural and synthetic fluid mass presented while providing said user with a full and complete range of motion thereby allowing said user the heretofore unrealized ability to multitask secondary natural and synthetic stratum while said multipurpose hand tool occupies space in, on and about said users hand.  
(Fig.AOK).

And as promised evidence of obvious variants...

Please find enclosed ~~five~~ samples of my multipurpose hand tool. You can easily see that each pair is left or right hand biased, and upon closer inspection, you will quickly notice that the basic structure of each tool is very similar to the basic structure of each other tool, yet you will no doubt note some slight variations from one tool to the next.

Please be mindful that each of these enclosed samples is completely capable of manipulating fluid mass, each sample is provided with a sharpenable edge, and that each sample comfortably accommodates a full and complete range of motion while multitasking secondary stratum.

Go Ahead, Try On All ~~Five~~, Then See If You Can Tie Your Shoes.

If there is anything more I can do for you, please don't hesitate to drop me a line anytime...

Happy Trails, Tasty Waves, Blue Sky's

A handwritten signature in cursive script that reads "Glen Falconer". The signature is written in black ink and is positioned above the printed name.
